Professional Summary

Aspiring Junior Backend Developer specializing in .NET actively seeking opportunities to apply skills and knowledge to innovative projects. With a strong foundation in server-side logic using the .NET framework and a passion for building robust and scalable applications, I am eager to join a dynamic team to leverage abilities to enhance application performance and data management. Committed to continuous learning and growth within the .NET ecosystem, and excited about contributing to the success of a forward-thinking company as a skilled Junior .NET Backend Developer.

Technical Skills

- **.NET Technologies:** C#, ASP.NET (MVC, Web API, etc.), Entity Framework (or other ORMs)
- **Programming Languages:** Java, C++ (Object-Oriented Programming), python, C#.
- **Backend Concepts:** RESTful APIs, Microservices architecture, understanding of design patterns
- **Data Management:** SQL (especially Microsoft SQL Server), understanding of NoSQL databases can be a plus
- **System Administration:** Windows Server (relevant for .NET deployments), Linux (increasingly relevant for cross-platform .NET development)
- **Front-End Development:** HTML, CSS, JavaScript.
- **Version Control:** Git, GitHub.
- **System Administration:** Linux & Windows Administration.

Work Experience

- [HRMangmenDashboard](#): An open-source HR Management System built with ASP.NET. It provides tools for managing employees, departments, and core HR operations efficiently. The project demonstrates a scalable architecture and clean API design, and its source code is available on GitHub for exploration.
- [Valens Supplements E-commerce Backend](#) : Developed and deployed a high-performance, robust, and scalable e-commerce RESTful API for a health supplements store (Valens Supplements). The backend is built using **Clean Architecture** principles, prioritizing modularity, security, and performance. It supports complete customer e-commerce flows, localized product catalogs, multi-dimensional product variants, and a comprehensive admin control dashboard with real-time financial reporting.

- [Vocab-trainer](#): An open-source Vocabulary Training API built with ASP.NET. It enables users to learn and practice new words through structured exercises and efficient vocabulary management. The project demonstrates clean API architecture, and its source code is available on GitHub for exploration.
- [AthrApp](#): Developed a full-featured volunteering platform that connects volunteers with organizations. Built RESTful APIs for authentication (email verification, OTP-based password reset, and Google login) and opportunity management (create, update, delete, approve, and reject opportunities). Implemented volunteer applications, real-time status tracking, and role-based access for guests, users, and organizations. Added features such as favorites, ratings, and category-based filtering to enhance user experience.
- [AthrDashboard](#): Developed the backend for a comprehensive admin dashboard to manage the entire platform. Implemented RESTful APIs for multi-role management (admins, organizations, and users), opportunity approval workflows, category management, and volunteer tracking. Built analytics and reporting endpoints providing key platform insights such as user growth, active categories, and top organizations.
- **Umbraco**: An open-source Content Management System (CMS) built on ASP.NET. It's known for its flexibility and scalability, used for creating complex websites and web applications. You can browse its source code on GitHub and explore its architecture.
- **ShopCommerce**: An open-source e-commerce platform built with ASP.NET Core. It offers a wide range of features for managing online stores, including product management, payment processing, shipping, and marketing. You can explore its code on GitHub.

Education

Bachelor of Information Technology, Egyptian E-learning University (EELU)

Graduated: 2026

GPA : 3.60

Soft skills

- Effective Communication: Ability to communicate with colleagues and clients
- Problem-Solving: Critical thinking and finding solutions to complex issues
- Teamwork: Ability to work within a team and achieve common goals
- Customer Service
- Time Management: Ability to organize tasks and manage time effectively
- Self-Learning: Willingness to learn new skills and self-improvement
- Adaptability: Ability to adjust to new situations and challenges
- Leadership: Ability to guide and motivate team members
- Collaboration: Working effectively with others towards a common goal
- Active Listening
- Customer Handling
- Conflict Resolution
- Fast Learner
- Multitasking
- Attention to Detail

Language Skills

- Arabic: Native
- English: Intermediate
